THE EIGHTYFIRST ANNUAL REPORT OF THE DIRECTOR OF MEDICAL & HEALTH SERVICES, UNITED PROVINCES, FOR THE YEAR ENDING DECEMBER 31, 1948.

CHAPTER I

Meteorology

The chief meteorological feature of the year in the Province was the occurrence of extensive floods caused by widespread and heavy rainfall in the north-western districts in August. On the whole total rainfall in the year was in slight to moderate excess over the province. Notes for specific periods of the year are as follows :—

Cold weather period (January-February) :—Total rainfall in January was in large excess in east U. P. and in slight excess in the west. Weather was dry during February except for a few showers in southern districts in the beginning of the month and in western districts in the latter half of it. Total rainfall in the month was in moderate defect in east U. P. and normal in west.

Maximum temperature was nearly normal in January and February. Minimum temperature was slightly above normal in January and normal in February. Cloud amount was in slight excess, and humidity was nearly normal in both months.

Hot weather period (March-May) :—Thunderstorm activity, an usual feature of this period, was generally less marked taking the Province and the period as a whole. Total rainfall was in moderate to large defect. Maximum and minimum temperatures were normal in March and slightly above normal in April and May. Cloud amount was slightly above normal in March and slightly below normal in April and May. Humidity was normal in all the three months.

Monsoon period (June-September) :—Weather was generally dry during the first 18 days of June. Thereafter, thunderstorm activity, accompanied by light to moderate showers, was experienced till the onset of the south-west monsoon on 26th. Total rainfall in this month was nearly normal in east U. P. and in large defect in west.

The monsoon was rather weak till the 9th of July, after which it became active causing widespread and locally heavy rains on most of the days. Total rainfall in this month was in moderate excess in east U. P. and normal in west.

The monsoon continued to be active throughout August, with very heavy rain in the north-west in the last week, causing unprecedented floods. During September also rainfall was in moderate excess in east U. P. and in slight excess in the west.

Maximum and minimum temperatures were generally above normal in June, and nearly normal in July, August and September. Cloud amount was normal in June and in slight excess in July, August and September. Humidity was nearly normal throughout the monsoon period.

The retreating monsoon period (October-December) :—Scattered thunder-showers occurred in first three weeks of October in north-western and eastern districts. Rainfall was in moderate excess,

Two spells of wet weather in south of the Province characterised the weather November. Rainfall was in large excess in November and in large defect in December.

Maximum temperature was slightly below normal in October and November and normal in December. Minimum temperature was in slight excess in October and normal in November and December. Humidity was nearly normal in all the three months.

CHAPTER II

Vital Statistics.

The following are the chief statistical data for the year 1948.

(a) Comparison of Provincial figures with those of preceding year :—

	Total		Rural		Urban	
	1948	1947	1948	1947	1948	1947
Mid-year estimated population.	59,869,520	59,208,306	51,966,211	51,452,868	7,903,309	7,755,438
Total births.	1,230,783	1,356,209	973,580	1,093,569	257,203	262,640
Birth-rate per mille.	20.56	22.91	18.73	21.25	32.54	33.86
Total deaths.	819,266	970,172	659,467	781,120	159,799	189,052
Death-rate per mille	13.68	16.39	12.69	15.18	20.22	24.38
Infantile deaths.	133,728	157,943	90,326	110,583	43,402	47,360
Infant death rate per thousand births.	108.65	116.46	92.78	101.12	168.75	180.32

(b) Comparison by communities in the Province.

	Birth rate per mille		Death rate per mille	
	1948	1947	1948	1947
Hindus	20.68	22.88	13.91	16.41
Muslims	21.94	25.01	13.86	17.53
Europeans and Anglo Indians.	5.30	6.72	3.26	4.03
Indian Christians	13.67	19.23	11.29	11.94
Other Classes	2.78	4.78	1.56	5.18

(c) Comparison of birth and death rates of U. P. with those of other provinces for the year 1948.

	Birth rate per mille	Death rate per mille	Rate of natural increase	Infant mortality per thousand births.
1. United Provinces.	20·56	13·68	6·88	108·65
2. Bihar	17·77	13·17	4·60	78·7
3. Bombay	33·35	21·57	11·78	141·38
4. Madras	31·28	18·12	13·16	128·13
5. Central Provinces	33·27	29·17	4·10	209·38
6. East Punjab	29·90	14·60	15·30	130·0

Birth rate for the province (20·56) was lower than that in the previous year (22·91) and in the year preceding that (24·93). It was also lower than the mean of the previous five years. Death-rate (13·68) was also lower than that of previous year (16·39) and of the year preceding that (15·69). It was also lower than the mean of the previous five years.

The birth and death rates for the year are the lowest on record. A further examination of the deaths recorded according to various causes reveals that while deaths from cholera and smallpox increased, a large reduction occurred under the head "Fevers." It is well-known that under "Fevers" are recorded deaths which cannot be attributed to epidemic diseases like cholera, smallpox or plague, and also that "Fevers" account for more than 80% of all deaths. A large reduction in the total number of deaths under "Fevers," therefore, is reflected in the lowered death rate of the province.

The birth rate for the province has been coming down for some years. This trend has been noticeable also in other provinces, but the rate for this year is abruptly low. The unusually lowered birth and death rates can at least in part be put down only to under-reporting. The matter is under investigation.

2. Registration of vital statistics—(a) Reporting of births and deaths is compulsory in urban areas and prosecutions were instituted for failure to report. Causes of death, as reported to Municipal authorities, were verified by Health staff and a fair percentage of them were found incorrect.

(b) Reporting of births and deaths is not compulsory in rural areas. Village chaukidars make notes of the events from which the monthly returns are compiled. Rural health staff check omissions and errors in chaukidars records. A fairly large number of omissions were found in them.

CHAPTER III.

State of Health of the Province and history of chief diseases.

Cholera was responsible for 52,604 deaths (2,882 in towns and 49,722 in rural areas) against 24,728 in the previous year. It first appeared in early February in the Ardh-Kumbh mela in Allahabad, where it had been imported from Nepal and Bihar and, by July, spread to a large number of districts. Incidence in the districts of Basti, Allahabad, Sultanpur, Bara Banki, Sitapur, Bahraich, Hamirpur, Kanpur, Bareilly and Banda was

heaviest. It declined in eastern districts from October, and disappeared by the end of November. Eight temporary cholera hospitals were opened in infected areas of Gonda, Basti and Gorakhpur. Kaoline, Essential oil mixture, sulphaguanidine, and specially made tablets containing sulphaguanidine Nicotinic Acid and Soda bicarb, were largely distributed for treatment. Over 39,40,800 anti-cholera inoculations were done.

Plague had a considerably lower incidence, total number of deaths being 13,722 (1,259 in towns and 12,463 in rural areas) against 51,455 in 1947. The start of the year found the districts of Faizabad, Basti, Jaunpur and Muzaffarnagar, and the city of Jhansi heavily infected. There was a milder prevalence in the districts of Jalaun Mirzapur, Fatehpur, Sultanpur, Unnao, Ballia, Kanpur, Saharanpur, Jhansi, Hamirpur, Deoria, Gorakhpur and the cities of Sitapur, Lucknow and Lakhimpur-Kheri. The months of March and April showed highest intensity, after which there was a decline and total subsidence towards the end of June. Infection reappeared in the month of August in Farrukhabad, Kanpur and Jhansi districts and by December reports had been received from 12 others. The incidence was mild.

Over 1,6,09,200 anti-plague inoculations were performed. Seventeen temporary plague hospitals with total bed-strength of 205 beds were opened in the infected areas in some of the districts. Over 1,200 cases were admitted, of which over 1,000 were discharged as cured, giving a recovery rate of 83 percent.

Anti-rat and anti-flea campaign was carried out in endemic areas of several districts and municipalities, and D. D. T. was used extensively for spraying and dusting of rat-holes.

Smallpox showed a slight increase, causing 9,629 deaths (1,959 in urban areas and 7,670 in rural areas) against 6,437 in the previous year.

Fevers—This general heading comprises malaria, enteric fever, measles, relapsing fever, Kala-azar, influenza, cerebrospinal fever, typhus fever, black water fever, and other fevers. The mortality from all fevers was 616,003 against 731,549 in the preceding year. Incidence of the more important of the fevers is discussed below :—

(a) **Malaria**—The number of deaths registered under this head was 531,165 (24,213 in towns and 506,952 in rural areas) against 633,878 in 1947.

(b) **Relapsing fever**—One hundred and twentyfive deaths (21 in towns and 104 in rural areas) were registered under this head against 210 in 1947.

(c) **Enteric fever**—Was responsible for 10,300 deaths (4,003 in urban areas and 6,297 in rural) against 11,554 in 1947.

(d) **Kala-Azar**—Was responsible for 146 deaths (94 in urban and 52 in rural areas) against 148 in 1947. These figures are under-reported as village chaukidars are unable to distinguish it from other fevers. It has a fairly widespread incidence in eastern U. P. Ten Kala-azar travelling dispensaries (out of 20 sanctioned) and 109 fixed dispensaries in the districts of Gorakhpur, Deoria, Banaras, Basti, Azamgarh, Ghazipur, Mirzapur, Jaunpur, Allahabad and Faizabad were equipped for investigation and treatment. Some 9,500 persons were treated. The ten travelling units surveyed over 2,600 villages with aggregate population of 441,800 and made blood examination of 11,500 cases, of which 8,600 were found positive.

(e) **Influenza**—Was responsible for 728 deaths (377 in urban and 351 in rural areas) against 439 in 1947.

(f) **Cerebrospinal Meningitis**—Was responsible for 78 deaths (27 in urban and 51 in rural areas) against 45 in 1947. The incidence was sporadic.

Respiratory diseases—Were responsible for 31,412 deaths (25,922 in urban and 5,490 in rural areas) against 37,923 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Figures for them were as follows :—

(a) **Pneumonia**—Was responsible for 14,093 deaths (13,429 in urban and 664 in rural areas) against 16,733 in 1947.

(b) **Tuberculosis**—(pulmonary) Was responsible for 4,105 deaths (3,068 in urban and 1,037 in rural areas) against 4,964 in 1947.

Tuberculosis of other forms though not included for official statistical purpose under "Respiratory diseases" is discussed here to indicate the incidence of Tuberculosis at one place. Tubercle of bones was responsible for 657 deaths (134 in urban and 523 in rural areas) against 683 in 1947. Other tubercular diseases were responsible for 2,679 deaths (1,754 in urban and 925 in rural areas) against 2,868 in 1947.

Educational work on the cause and prevention of tuberculosis was carried on at local Tuberculosis clinics, many of which were provincialised and by the U. P. Tuberculosis Association. Over 1,100 shows of a film trailer on Tuberculosis prepared by the department were given at cinema houses in the Province. Illustrated posters and booklets on Tuberculosis were also supplied to over 2,820 schools with Junior Red Cross Groups.

Dysentery and diarrhoea—Were responsible for 14,945 deaths (11,573 in urban and 3,372 in rural areas) against 18,936 in 1947.

Beri-Beri—Was responsible for 89 deaths (74 in urban and 15 in rural areas) against 76 in 1947.

Injuries—Were responsible for 8,722 deaths of which 697 were from suicide, 6,191 from wounds or accidents, 1,570 from snake-bites, 67 from rabies and 197 by wild animals. The corresponding figures for 1947 were 1,088 from suicide, 8,212 from wounds or accidents, 2,195 from snake-bites, 137 from rabies and 187 by wild animals.

Under all other causes 72,229 deaths were recorded against 87,325 in 1947.

Deaths at child-birth—(i. e., maternal mortality) numbered 1,589 (1,366 in urban and 223 in rural areas) against 1,946 in 1947.

Leprosy—Was responsible for 411 deaths (158 in urban and 253 in rural areas) against 544 in 1947. A Leprosy Officer was appointed by the Provincial Government from February for organising out door leprosy clinics at hospitals and for survey and inspection. He was also attached to the Lucknow Leper Hospital—an annexe of the Skin Department of the Lucknow Medical College visited by cases from all over the Province—where investigations are made and results of treatment observed. Physical exercises and occupational therapy in the form of kitchen garden and farming were introduced at the Lucknow settlement. Articles on preventive aspects of leprosy were also contributed to the Press.

Goitre is chronic in Jaunsar-Bawar area of Dehra Dun valley. A scheme of mass administration of iodine through salt consumed in the area was started in October. Result are being watched.

Treatment of infectious diseases in separate Infectious Diseases Hospitals is provided in 21 larger towns only. Consistently with the policy of Government to provincialise those at pilgrim stations, those at Hardwar, Vrindaban, Ajodhya and Mirzapur were provincialised. In smaller towns detached blocks are to be put up in the premises of existing hospitals. Some progress was made towards their construction.

CHAPTER IV

Fairs and Festivals

The six-yearly Adh-Kumbh mela was held at Allahabad in February. Some cholera was imported into it from Nepal towards the main bathing day, and spread owing to considerable increase in gathering of the next few days caused by immersion ceremonies of the ashes of Mahatma Gandhi. The gathering at the Sangam area, which was also the main fair area, was estimated at five lakhs on the main day, and much more on the subsequent day of immersion.

Inoculation against cholera as a condition of entry into place of pilgrimage was imposed for the Savan Jhula fair at Ayodhya in August and for Badrinath and Kedarnath in Garhwal from April to October.

CHAPTER V

Urban Sanitation

High prices and shortage of labour and material made it difficult to maintain municipal conservancy at a proper level, and local schemes of housing and town planning made little headway.

There is a certain amount of smoke-nuisance in Farrukhabad town from furnace for manufacture of brass and copper utensils. Provision of chimneys is being insisted upon in such cases. Considerable improvement in abatement of smoke-nuisance in Kanpur city has been brought about in recent years, the rate of discharge of black smoke having been brought down from 13.2 minutes per hour per chimney in 1941 to 3.01 minutes per hour per chimney in 1948.

Conversion of habitation waste into agricultural Compost— was in operation at 170 urban centres of population, besides refugee camps. Material arising during village fairs are also being made use of for the purpose. Subsidies originally allowed by Agricultural department to popularise its use are being reduced, as its value as a fertilizer is being realised. Field experiments were continued on Government and private farms, and confirmed that the application of one ton of dry compost yielded about one maund of extra food grains. Municipal towns are taking increasing interest, but shortage of land, transport and sweepers' rights over their pe fonal collections in certain towns are causing difficulties. Where land is taken far out o the city, and transport proves difficult, boards are being given loans by Government to purchase vehicles.

Expenditure by Municipal Boards on Public Health.

Total receipts of municipal boards from all sources including government grants during the year 1947-48 was Rs. 6,36,93,619 out of which expenditure on Public Health was Rs. 2,09,85,741, as detailed below :

					Rs.
1.	Public Health Staff including all establishment charges on Public Health.	67,66,483
2.	Registration of births and deaths.	81,674
3.	Maternity and Child welfare.	96 119
4.	Vaccination.	1,28,399
5.	Epidemic diseases excluding hospitals and dispensaries and infectious diseases hospitals but including cost of quinine.	2,65,629
6.	Fairs and markets.	1,82,854
7.	Slaughter houses.	1,41,714
8.	Infectious disease ^s Hospital's	2,83,585
2.	(Conservancy) Capital	8,23,612
	Ordinary	32,12,981
10,	(Drainage) Capital	10,71,777
	Ordinary	10,99,118
11.,	(Water supply) Capital	14,68,815
	Ordinary	37,97,066
12.	Food Adulteration.	16,508
13.	Town improvement including paving of streets, removing of obstructions etc.	9,70,547
14.	Public Health propaganda	1,492
15.	Miscellaneous sanitary charges	5,77,368

CHAPTER VI

Rural Sanitation

Advice was given to the Rural Development staff and to villagers on the construction of sanitary works and the improvement of wells. A provision of Rs. five lakhs was made in the year 1948-49 for improvement of water-supply in rural areas and in hill villages. The offer of interest-free loans for improvement or construction of drinking water wells, of which mention was made in last year's report, was not availed of to any large extent.

Bored-hole privies.—An intensive drive for popularising bored-hole latrines in rural areas is shortly to be made. The bores are to be made free of charge. The superstructure is to be made by the people. One borer to start with is being provided by Government in each district. Squatting plates will be made by health departments locally and issued at cost price.

Health Unit at Pratapgarh continued to function. It covers an area of 67 square miles, with 123 villages and population of 60,013 rural and 19,405 urban. Over 240 manure pits were dug, 48 soakage pits were constructed, 16 bored-hole latrines were installed, 18 drinking water wells were protected, 36 old wells were repaired, 11 bathing platforms were constructed and 66 cattle sheds were made sanitary during the year.

Expenditure by District Boards on Public Health.—The total receipts of District Boards in the province from all sources including Government grant during the year 1947-48 was Rs. 3,88,56,504 out of which expenditure on Public Health was Rs. 10,72,331 distributed as follows :—

					Rs.
1.	Public Health staff including all establishment charges on Public Health.	2,96,833
2.	Maternity and Child Welfare.	17,350
3.	Vaccination.	5,10,969
4.	Epidemic diseases excluding hospitals, dispensaries and infectious diseases hospitals but including cost of quinine.	44,813
5.	Fairs and markets	1,00,829
6.	Slaughter houses.	3,918
7.	Infectious Diseases Hospitals.	100
8.	(Conservancy) Capital	46,124
	Ordinary	7,027
9.	(Drainage) Capital	4,424
	Ordinary	300
10.	(Water Supply) Capital	2,307
	Ordinary	6,752
11.	Food Adulteration	30
12.	Public Health propaganda	2,936
13.	Miscellaneous sanitary charges	27,619

CHAPTER VII

Malaria

No undue prevalance was reported in the year 1948 except from Mathura and Agra districts, as against eight districts in the previous year. An epidemic was apprehended due to heavy rains and floods and, as a safeguard, the affected areas were equipped in advance with anti-malaria drugs and D.D.T.

Malaria surveys and investigations were undertaken in nine places and necessary recommendations made. Special treatment schemes with quinine-plasmoquine and Cinchona-plasmoquine were undertaken in over 200 villages of Tarai and Bhabar Government estates of Naini Tal district. Quinine and quinine substitutes were also distributed free to actual malaria sufferers with satisfactory results.

Malaria control units. Anti-malaria control measures in connection with Sarda Hydel construction in Naini Tal tarai were continued. Of the six units sanctioned by the Provincial Government for hyper-endemic areas four could not function owing to non-availability of staff. Main activities of the two units that worked were indoor residual spraying with D.D.T. and paludrine prophylaxis and treatment.

Colonisation anti malaria units. Two such were in operation—one at Kichha in Naini Tal tarai and the other in Ganga Khadir of Meerut district which by considerably reducing malaria in these areas, brought under plough over 10,000 acres of land which could not be previously settled owing to adverse health conditions. Anti-malaria measures chiefly adopted in these areas consisted of spraying of dwellings, cattle shed, etc., and the use of polludrine for prophylaxis and treatment.

Sale of quinine and substitutes—This department is the agency for distribution to Government institutions, medical practitioners and chemists, of quinine and quinine products released by Government of India at reduced rates. A total of 5,618 lbs. of quinine sulphate, 2,069 lbs. of cinchona febrifuge, 111 lbs. of tota quina, 6,634,000 tablets of quinine substitutes and 3,015 boxes of injectible quinine were issued through this source.

CHAPTER VIII

Maternity and Child Welfare

Prior to April 1, 1948, Maternity and Child Welfare in the U. P. was controlled by the U. P. Branch of the Indian Red Cross Society though most of the funds were provided by Government. As the volume of work had outgrown the capacity of a voluntary organisation, its general control was taken over by Government from April 1, 1948, as a direct provincial activity. The Headquarters organisation, two training institutions and all rural and semi-rural centres were provincialised, and some 50 additional centres opened in villages, making a total of 200 for rural areas. There was a complete reorientation of policy in respect of this work in rural areas. The attempt so far made to extend it in villages by opening maternity centres was abandoned as, at least for a long time to come, trained midwives in sufficient number would not be available. It was decided instead to upgrade local material already available in villages, i. e. the indigenous dais. Provision has therefore been made in Government's scheme for the training of 5 such dais at each rural centre in aseptic methods and the recognition of abnormalities. Stipends of from Rs. 15 to Rs 20 p. m. is paid to each trainee for a period of nine months during which the training lasts.

Financing and control of maternity centres in urban centres of population is now the responsibility of local municipal boards. On April 1, 1948, when the reorganisation took effect there were 123 such centres.

To ensure closer integration of domiciliary midwifery service with women's hospitals, the direction of Maternity and child Welfare centres has been placed under the Deputy Director of Medical and Health Services incharge of Women's hospitals.

The Silver Jubilee Health School continued to train health visitors and midwives. Training in rural procedures was given to them in the Province's Health Unit at Pratapgarh.

CHAPTER IX

Health of School Child

Medical inspection of school children was conducted by whole time School Health Officers in 14 larger towns and by Municipal Medical Officers of Health in others. Inspection in primary schools are on what is called "ordinary" lines while in higher secondary schools they are on "detailed" lines. In the latter group examination on detailed lines were conducted in 385 out of 926 institutions specified for the purpose, and 56,623 scholars out of 262,523 were seen. For ordinary examination 2,423 out of 11,825 primary schools were visited, and 145,329 scholars out of 1,054,357 on roll were seen and advised. The following is a table of the main defects noticed in urban and rural group of scholars.

Nature of defect.	Percentage of cases found defective			
	Urban		Rural	
	1948	1947	1948	1947
1. Poor nutrition.	18.3	17.5	17.5	26.2
2. Teeth and gums	8.2	6.1	8.8	13.7
3. Pyorrhoea	2.4	2.1	2.2	1.0
4. Tonsil and adenoids.	11.8	12.6	5.4	5.1
5. Mouth breathing	1.1	2.3	2.0	0.6
6. Other glandular enlargements	4.3	3.4	5.6	1.8
7. Diseases of eyelids.	3.7	3.3	7.4	6.7
8. Defective Vision.	7.6	9.7	5.5	2.0
9. Enlarged spleen.	0.5	0.6	5.5	2.1
10. Skin diseases	3.9	3.1	6.0	2.8
Boys with one defect only	22.6	25.7	29.4	13.1
Boys with more than one defect.	14.5	16.9	9.1	5.0

Correction of defects.—Thirteen out of 14 school clinics worked during the year, and treated 42,967 new and 60,696 old cases, including those seen by honorary ophthalmologists and dentists attached to these clinics. Cases requiring more prolonged treatment were, as usual, referred to district hospitals. Over 340 boys at seven clinics were supplied milk or vita-milk free of charge, and 492 pairs of spectacles were issued to those in indigent circumstances. Guardians of boys were encouraged to visit clinics where special needs of their wards were explained to them.

CHAPTER X.

Health Education.

Health education was as usual carried on by officers of the Hygiene Publicity Bureau, by district, municipal and school health officers, and to a small extent by medical officers of dispensaries. Illustrated by magic lantern slides, posters and leaflets were used. Articles were contributed to the press and some talks were given on the Radio. Shows were given at road-side villages by the publicity van. Health exhibitions were organised at many places. Propaganda on the need for balanced diets, and on the tuberculosis was undertaken. Lectures on the prevention of blindness were given in schools and to pupil teachers in Training Colleges, Normal Schools and Junior Red Cross groups.

Red Cross. There was further fall in membership for Junior Red Cross, some 80,673 (including 676 girls) having been registered in 3,412 Junior Red Cross groups in 2,829 schools, against 85,761 scholars in the previous year. The Juniors did health propaganda in their villages and prepared posters, charts and models. One hundred and sixteen first aid outfits were distributed for training in elementary first aid and in epidemic emergency to groups which showed particular keenness for such work.

St. John Ambulance Association. Over, 4,560 persons were trained and awarded certificates in various courses of the Association, against 2,930 in the preceding year. In addition 3,353 certificates were granted to school children in First Aid, Hygiene and sanitation against 2,374 in 1947.

The number of Ambulance divisions at the close of the year was 37 (an increase of two over previous year), with a total strength of 1,004 members. The number of Nursing divisions was 6 (8 in the preceding year) with a total strength of 150 and that of cadet divisions of boys and girls was 60 (56 in 1947), with a membership of 1,411.

First-aid posts were established at the Ardh Kumbh fair at Allahabad and the subsequent immersion ceremony of Mahatma Gandhi's ashes at Allahabad, besides other places, and did useful work. During the floods in Allahabad district members of Allahabad and Kanpur Corps visited affected areas with first-aid outfit, and assisted in evacuation and relief, and the distribution of medicines.

CHAPTER XI

Public Health Administration

For lack of doctors it has not been possible to fill all posts created in the previous year for control of epidemics, for mechanised units, malaria and Kala-Azar units. Measures to increase the supply of doctors by increasing the number of admission to the Medical Colleges have already been taken.

A post of Assistant Director for the Hygiene Institute was created in view of increase in work of the institute.

Budget grants. There has been increase in budget allotment under "Public Health" consistently with increase in activities. The revised grant for the year 1948-49 was Rs. 1,02,65,000 including the allotment for Public Health Engineering Section and grants for sanitary works. Actuals for the year 1947-48 were Rs. 91,80,042 against Rs. 70,16,988 for the year 1946-47. Allotment for the year 1949-50 is Rs. 1,11,86,300.

CHAPTER XII

Vaccination

There are 444 towns in the United Provinces for purposes of recording vital statistics, of which vaccination was compulsory in 249. Taking the figures for all towns 556,829 persons were vaccinated and revaccinated in 1948 against 407,334 in the preceding year. In the rural areas 1,706,674 persons were vaccinated or revaccinated against 15,78,841 in 1947.

Approximate number of Children under one year of age available for vaccination in the year 1948 was 213,801 in towns and 833,254 in rural districts, of whom 136,065 and 636,125 respectively or 63.64 and 72.02 per cent. were vaccinated. Number vaccinated in age group 1-5 year was 55,571 in towns and 349,853 in rural districts.

Number of vaccinations performed in 1948 was 2,279,527 (1,337,882 primary and 941,645 revaccinations) against 1,995,243 (1,33,9693 primary and 655,550 revaccinations) in 1947. Percentage of successful vaccination in which results were known was 98.22 for primary operation and 78.02 for revaccination. No case of encephalitis following vaccinations was reported.

Government Vaccine Depot. The amount of vaccine lymph manufactured was 2,83,235 grammes against 1,41,951 grammes in 1947. Quantity issued during the same period was 257,198 grammes against 166,849 in the previous year. 30,000 grammes were issued to East Punjab Government.

CHAPTER XIII

Other Public Health Services.

Hygiene Institute—conducted courses and examinations for sanitary inspectors and health visitors, the course in Hygiene for M. B., B. S. of Lucknow University; the departmental examination in sanitary law for Medical Officers of Health, and a course for laboratory technicians. It undertook examination of stools from suspected cases of cholera referred to it from outlying districts and towns, blood and smears from suspected cases of plague; samples of factory effluent water, food, ice, chemicals and pathogenic material submitted by various authorities, and carried out control check over local analysis of public water supplies. It carried out an investigation to ascertain the cause of increasing brackishness of water in Ballia town and Sikhar in the interior of Mirzapur district, and surveyed bacteriological quality of market milk.

Manufacture of cholera vaccine—Over 1,992,400 doses of cholera vaccine were manufactured against 1,582,000 in 1947. Over 66,500 doses of T. A. B. vaccine were also manufactured.

Nutrition—A separate section on this was established in the provincial Health Department from July, 1948 which surveyed the nutrition state of the population of refugee camps in the Province, and supplied Information Department short notes on methods of improvement of the diet of general population for microphone talks and for publication in the Press.

Milk feeding schemes subsidized by Provincial Government continued to operate in primary schools of Lucknow and Kanpur cities covering 3,680 students. A separate self-supporting scheme in an aided Girl's School in Lucknow also continued during the year.

Multi-vitamin tablets were distributed free to inmates of refugee camps and lactating mothers attending maternity centres whose nutritional state required to be fortified. Some vita-milk was also supplied to refugee camps and maternity centres.

Food adulteration—The Food Adulteration Act was in force in all municipal notified and town areas, in all cantonments and in a large number of villages. The number of food samples submitted to the Public Analyst for analysis was 14,886 against 14,421 in 1947. The following was the result of analysis :—

Food sample	No. analysed in	Percentage of adulteration.	
		1948	1947
1. Ghee & butter	3,024	31.45	22.9
2. Milk	6,445	43.16	47.4
3. Flour	548	59.61	34.8
4. Edible oils	1,860	30.58	22.7
5. Miscellaneous	1,631	31.06	28.3

Number of cases sent up for prosecution was 5,527 of whom 4,371 resulted conviction. Average fine inflicted for the offence of adulteration was Rs 55 for first offence and Rs. 112 for subsequent offence. A sum of Rs 52,756 as additional fine was realised from cases resulting in prosecution—this to cover the cost of analysis.

An investigation on rancidity of oils and fats was undertaken by an officer of the Public Analyst's Branch and the request of the Research Grants Committee of the Provincial Government. A quality survey of certain Indian Pharmacopeal preparations was also undertaken.

Drugs standard control—With the enforcement of the Drugs Act, control over the purity of drugs sold in retail has been tightened up. Out of 90 samples received for analysis, 33 were found adulterated. The main provisions of the Drugs

rules were brought to the notice of vendors, who were asked to comply with them and take out licences. Some 7,100 licences were issued and 56 applications were rejected. Over 3,360 sale premises were inspected.

Applications for licences to manufacture were received from 75 persons, 40 of which were granted.

CHAPTER XIV.

Industrial Hygiene.

Municipal Medical Officers of Health continued to function as ex-officio Inspectors of Factories, and advised on working condition of operatives. Improper disposal of effluent from sugar factories, distilleries and tanneries has caused nuisance in some places. It is proposed to appoint a committee to advise on the matter.

In connection with the Employees' State Insurance Act a preliminary survey of hospital facilities in industrial areas was started from January, 1948. to determine what extra provision was needed to give effect to the Act. Over 691 out of 1,063 perennial factories coming under the scheme, with 163,325 registered employees, were surveyed by the end of December, 1948.

Refugee relief—Medical and sanitary arrangements at refugee camps were continued on lines noted in previous year's report. The larger settlements have one or more midwife and a small dispensary, besides conservancy and sanitation staff. Smaller camps are visited by doctors of nearest Government or District Board dispensary and have arrangements for removal of serious cases to hospital.

LUCKNOW :

June 12, 1949.

A. C. Banerjee

Director of Medical & Health Services, U. P.
